

## Editors' Speak

---

### Readers' Special

Times are changing. A lot of interest has been displayed with endoscopic ear surgery, and some claim it to be a paradigm shift from the conventional microscopic ear surgery. Being in its infancy, it is premature to say how sustainable endoscopic ear surgery shall be, but the increasing number of submissions comparing the two techniques indicate a willingness for us to accept change.

This issue has a few articles dedicated to endoscopic ear surgery, with more to come in the forthcoming issues. There are also some articles depicting newer ways to handle certain issues.

All in all, our readers have always kept us inundated with their faith in this periodical in the form of an overwhelming number of submissions, and we sincerely appreciate that.
