

Rhinology

We have an interesting collection of articles in this issue.

A majority of the original research is today focusing on innovative ways to tackle common pathologies.

An important stage of evolution in the life of a clinician is when he/she embarks on a process of rediscovery. The erstwhile years are usually spent in mastering standard accepted techniques; then comes a stage when the treating clinician begins to ruminate and improvise on accepted techniques. The aim is to provide the same result if not better with a more customized indigenous approach. This may often result in nothing; and then there are times when that 'Eureka moment' presents itself.

In addition, we have dealt with nasal issues pertaining to COVID, a thing that we may have to probably factor into our lives, albeit in a mild and tolerable form.

Nothing stimulates the reader more than a peer's tryst with innovation. Wishing many more to come.
