

## Editors' Speak

---

This issue has been dedicated to the patriots of basic Rhinology.

While the world is seeing a rapid advancement in the expansion of boundaries of traditional "Rhinology," with a lot of the younger surgeons embarking into "skullbase," "powered instrumentation" and so on as is evident from the increasing reports in world literature on the same, the fact remains that a majority of routine otorhinolaryngology practice still deals with basic rhinology issues. This issue has been an attempt to highlight the same.

Whereas some articles deal with newer ways to perform time-tested surgeries, others deal with newer ways to analyze pathologies known and treated since time immemorial.

Tropical diseases are still far from eradicated, with numerous reports still being churned out as these organisms and parasites take newer and varied presentations; often these are being diagnosed at atypical sites with a varied aggression.

This shall be the first of many issues that deal with basic rhinology.
